Development: Node.js, Redux, MongoDB, Mongoose, HTML, CSS

Frameworks/Libraries :React.js, Angular (learning), Redux, Express.js, Tailwind CSS

Others: Git, Github, Github Pages, Microsoft Visual Studio, Postman, MongoDBCompass

EXPERIENCE

Web Developer Intern

December 2024 - June 2025

SaralTech™ - A Group of Trusted Venture Builders

Remote

Maintained and updated the Saral School website using React.js and Tailwind CSS. Focused on enhancing site performance, building responsive UI components, and delivering a smooth user experience.

- Independently redesigned the entire website's styling and UI using React.js and Tailwind CSS—without any provided UX/UI mockups—and successfully deployed the updated design to the live production site.
- Developed and managed dynamic content sections such as "Popular Courses" and "Top Searched Courses" to enhance course discoverability.
- Designed and implemented a new Blog section to highlight user stories and experiences with Saral School, enhancing community engagement and content diversity.
- Built a dedicated Articles page to improve content structure and readability.
- Resolved critical form submission issues by integrating and debugging RESTful API endpoints, ensuring smoother user interactions.

PERSONAL PROJECTS

•Personal Portfolio Website

Personal portfolio with projects, skills, and contact info. Built with ReactJS, Tailwind CSS, React Icons, Framer Motion.

•Netflix GPT

Developed a full-stack AI movie recommendation app integrating OpenAI GPT and TMDB API for intelligent suggestions.

- Implemented authentication using Firebase (Sign Up, Sign In, Profile Update, Protected Routes).
- Fetched and displayed real-time movie data and trailers using TMDB APIs.
- Integrated OpenAI GPT for AI-powered movie recommendations and natural language search.
- Built frontend with React and Tailwind CSS; used Redux for global state management.

•Study Notion

Developed a full-stack edtech platform supporting multi-role access for students, instructors, and admins.

- Built a responsive and dynamic UI with tabs, sliders, and animations.
- Implemented email OTP-based authentication, profile editing, and cron-based account deletion.
- Enabled instructors to create, edit, and publish courses with videos, subsections, and earnings analytics.
- Integrated Razorpay for secure course payments (Buy Now and cart functionality).
- Designed student dashboards for video lectures, progress tracking, and course reviews.
- Developed admin dashboard for managing categories, users, and platform data.

ACHIEVEMENTS

–Top 11 finalist - DcodeBlock Hiring Hackathon

March 2025

out of 1200+ participants for successfully developing a frontend project based on a Figma design.
